

Looking Ahead

When we think of the future, we envision classrooms and meeting rooms where images, applications and information are literally at people's fingertips. We envision students around the world, experiencing the rewards of learning, whether they learn best by seeing, hearing or doing. We envision teams collaborating simultaneously around the world, at home and in offices, developing ideas on SMART Board interactive whiteboards, making decisions quickly and minimizing the barrier of distance.

We are passionate about our vision. Our motivation comes from educators and business professionals who tell us they can't imagine working without SMART solutions. Students who once struggled have found their stride, teachers have rediscovered their love for learning and business teams have found new ways to collaborate and become more productive.

That's what drives SMART staff around the world to invest their energy in innovation. Our teams are united in their desire to create intuitive products that help educators and business people achieve their goals.

2011 marks the 20th anniversary of the SMART Board interactive whiteboard – a milestone that reminds us of the long-lasting and profound impact our solutions have had on our customers. Over the next 20 years, we're committed to further innovation to deliver on our vision of changing the way the world works and learns.
